

Why should You
care?

Some Statistics

- More than 50% of leading IT organizations are using open source
- 30% of software at these companies is open source, up from 10% five years ago
- 4 out of 5 developers use open source for development, application deployment, or both
- 1 out of 4 developers target Linux as their primary platform
- 1 out of 5 developers contribute to at least one open source project

Some Statistics

- 80% of front line IT people say they use open source in some way
- US adoption is closing the gap with Europe

Regional adoption in the Southeast

“Which of the OSS infrastructure tools have you included as part of your development activities or deployed an application or software project to? “(Select all that apply.)

Base: 1,900 software decision-makers at North American and European enterprises and SMBs

JOBS

Welcome to the Adafruit jobs board! The jobs board is for designers, makers, programmers, artists and engineers who are looking for great places work at & projects to work on. And like most job boards, this job board is for companies and people who need the best talent for their projects and companies.

This is a free service provided by Adafruit, all you need to do to use the job boards is be an Adafruit customer. To post your job offer or your skills (job-seeker) just log in to your Adafruit account and post a new job/skill listing or reply to the job listing.

We're currently in beta, [please let us know](#) if there are any issues as you use the site. Thank you and happy connecting!

Stripe is hiring

8 days ago

Stripe is a new way to accept payments on the web. We launched publicly a little over a week ago at <http://news.ycombinator.com/item?id=3053883>.

We're currently hiring engineers and designers. We're looking for people who care deeply about quality of execution, who want to build technology that people love to use, and who are excited to make it easier to build a business on the web. If you think you'd enjoy the challenge of building a new piece of internet infrastructure, we definitely want to talk.

And, for engineers:

- You love to code for fun.
- You enjoy reading and/or have written papers.
- You have a history of open-source contributions or a desire to write open-source code.

Never asked for a resume!

When it comes to hiring, I'll take a Github commit log
over a resume any day

--John Resig

Case Study:

SC Dept. of Corrections

- IT budget drives the effort
- Technology
 - Java
 - Eclipse IDE
 - Apache web server
 - ANT
 - CVS
- Use Linux: OpenSUSE and Ubuntu
- LibreOffice used for document creation
